University of Wisconsin – Madison
ADVANCE Program:
Did we transform the institution in 5 years?

Molly Carnes, MD, MS
Co-Director,
Women in Science and Engineering Leadership Institute
(WISELI)
Presentation to the National Science Foundation
November 29, 2007
Institutional Transformation:

- Alters the culture of the institution by changing select underlying assumptions and institutional behaviors, processes, and products
- Is deep and pervasive, affecting the whole institution
- Is intentional
- Occurs over time

Eckel, Hill, & Green, 1998; American Council on Education
## Stages of change for smoking cessation

<table>
<thead>
<tr>
<th>Stage</th>
<th>Smoker</th>
<th>IT - Individual</th>
<th>IT - Institution</th>
</tr>
</thead>
<tbody>
<tr>
<td>Pre-contemplation</td>
<td>“Smoking is not a problem and I enjoy it!”</td>
<td>“We’ve always done it this way, and it seems to work just fine.”</td>
<td>No resources committed to solutions</td>
</tr>
<tr>
<td>Contemplation</td>
<td>“I am worried that smoking is bad for my health and I want to quit.”</td>
<td>“If we want to keep the best and brightest, we must figure out a way to keep the women from leaving.”</td>
<td>Task force charged with reviewing local data</td>
</tr>
<tr>
<td>Preparation</td>
<td>“I am going to buy a nicotine patch and quit on my birthday.”</td>
<td>“I am reading Why So Slow? By Valian”</td>
<td>A strategic plan for diversity is developed</td>
</tr>
<tr>
<td>Action</td>
<td>“I quit!”</td>
<td>“I called the program chair and complained that there were no women speakers”</td>
<td>Women chair hired</td>
</tr>
<tr>
<td>Maintenance</td>
<td>“I enjoy being able to breathe more than smoking.”</td>
<td>“I am proud of the advances our school has made hiring and promoting women.”</td>
<td>Institutional data is monitored and made public</td>
</tr>

Carnes et al., 2005
5 assumptions about adult learning
Malcolm Knowles, 1984

- Adults are independent and self-directing
- They have accumulated a great deal of experience, which is a rich resource for learning
- They value learning that integrates with the demands of their everyday life
- They are more interested in immediate, problem-centered approaches than in subject-centered ones
- They are more motivated to learn by internal drives than by external ones
UW-Madison’s NSF ADVANCE Institutional Transformation Award

General strategy = hit the issues from all angles and imbed them in every discussion

- Develop a visible presence on campus to coordinate all initiatives: Women in Science & Engineering Leadership Institute (WISELI)
- Mount new initiatives that fill gaps in UW-Madison’s environment
- Evaluate impact of both old and new initiatives
- Perform research to understand issues for women faculty
- Disseminate current best-practices
Six Schools/Colleges Targeted: Biological and Physical Sciences

- College of Agricultural and Life Sciences
- College of Engineering
- College of Letters and Science
- Medical School (now the School of Medicine and Public Health)
- School of Pharmacy
- School of Veterinary Medicine
Whenever possible...

- Broaden interventions to reach the entire campus:
  - E.g. collaborate with Provost’s office on WISELI faculty worklife survey
- Expand diversity to include ethnic and racial minority issues
  - E.g. include research on unconscious gender and racial/ethnic group biases
- Leverage additional resources
  - E.g. endowment for Life Cycle Research Grants, apply for NSF programs with aligned missions (e.g. LSAMP, AGEP)
- Apply what we learn beyond UW-Madison
  - E.g. Examination of scientific review processes that would enhance application of gender bias
Academic core values at the root of WISELI initiatives

• WISELI established as a *Research* Center led by *faculty*
• Strategies draw from:
  – Conceptual frameworks for transferring research into practice
  – Principles of adult education
  – Clinical research on intentional behavioral change (e.g. stages of change for smoking cessation)
• Controlled, experimental studies from social and cognitive psychology presented
• Data from WISELI initiatives
  – UW-Madison = Living Laboratory
  – Fed back to faculty
• WISELI leaders presenting and publishing results in peer-reviewed venues further enhance credibility
Major WISELI Research Projects

- Study of Faculty Worklife at UW-Madison
  - All-faculty surveys in 2003 and 2006
- Ethnographic study of gender in a laboratory setting
- Discourse analysis of gendered interactions in meetings
- Exit interviews with women STEM faculty who left UW-Madison
- Analysis of pools and recipients of major campus awards
Major WISELI Programs

• **Searching for Excellence & Diversity**
  – Workshops for chairs of hiring committees at UW-Madison
  – *Implementing Training for Search Committees*
    workshop for other campuses
• **Enhancing Department Climate: A Chair’s Role**
• **Vilas Life Cycle Professorship Program**
• **Celebrating Women in Science & Engineering Grant Program**
Teach faculty how to run effective searches

Active learning

Principles of adult education

Tenets favoring diffusion of innovation and institutional change

Introduce research on biases and assumptions

Present evidence-based strategies

Searching for Excellence and Diversity – Workshops for faculty search committees
Five elements of a successful search

1. Run an effective and efficient search committee
2. Actively recruit an excellent and diverse pool of candidates
3. Raise awareness of unconscious assumptions and their influence on evaluation of candidates
4. Ensure a fair and thorough review of candidates
5. Develop and implement an effective interview process
What is “unconscious bias”

- Unconscious bias and assumptions
- Previously held beliefs about a social category
- Schemas
- Stereotypes
- Mental models
- Cognitive shortcuts
- Statistical discrimination
- Implicit associations
- Spontaneous trait inference

The tendency of our minds to judge *individuals* based on characteristics (real or imagined) of *groups*
Background on Gender

DESCRIPTIVE: How men and women actually behave

PRESCRIPTIVE: Unconscious assumptions about the way men and women in the abstract “ought” to behave:

– **Women**: Nurturing, nice, supportive, helpful, sympathetic, dependent = generally less valued in society (i.e. paid for)
– **Men**: Decisive, inventive, strong, forceful, independent, “willing to take risks” = generally more valued

RELEVANT POINTS:

– **Leaders, physicians, scientists, professors**: Decisive, inventive, strong, independent
– **Social penalties** for violating prescriptive gender assumptions
– **Unconscious gender stereotypes** are easily and automatically activated and once activated readily applied
“Are you just pissing and moaning, or can you verify what you’re saying with data?”
• 114 applications for prestigious research postdocs to Swedish MRC (52 women)
• Reviewers’ scores vs standardized metric from publication record = impact points
• Women consistently reviewed lower, especially in “competence”
• Women had to be 2.5x as productive as men to get the same score
• To even the score, women needed equivalent of 3 extra papers in a prestigious journal like Science or Nature
Curriculum vitae sent to 238 academic psychologists (118 male, 120 female)

Randomly assigned male or female name to cv

Academic psychologists gave cv’s with male names attached higher evaluations for
  – Teaching
  – Research
  – Service Experience

More comments on cvs with female name

Evaluators were more likely to hire the male than the female applicant
312 letters of rec for medical faculty hired at large U.S. medical school

Letters for women vs men:
- Shorter
- 15% vs 6% of minimal assurance
- 10% vs 5% with gender terms (e.g. “intelligent young lady”; “insightful woman”)
- 24% vs 12% doubt raisers
- Stereotypic adjectives: “Compassionate”, “related well…” vs “successful”, “accomplished”
- 34% vs 23% grindstone adjectives
- Fewer standout adjectives (“outstanding” “excellent”)

Trix and Psenka, *Discourse & Society*, 2003
Semantic realms following possessive (e.g. “her training”; “his research”)
Distinctive semantic realms following possessive
Consistent story in field and experimental studies over several decades –

- Women and the work performed by women receive lower evaluations than men and the work performed by men – even if the work is identical – multiple studies: e.g. Heilman, 2004; Wenneras and Wold, 1997; Steinpreis, 1999

- Sex of the evaluator makes no difference – i.e. both men and women give women lower evaluations – nearly universal

- Women are particularly disadvantaged at evaluation points advancing to high authority positions, especially elite leadership positions – multiple studies; e.g. Sczesny et al., 2006

- Women, but not men, who self-promote receive lower evaluations – Several studies; e.g. Rudman, 1998

- Those who think they have no biases provide the most biased evaluations – Uhlmann and Cohen, 2005

We all have gender-biases (conscious or unconscious) and they would be predicted to disadvantage women in evaluation for a position traditionally held by a man.
Conditions which activate gender bias in evaluation to the detriment of women

• Time pressure and high cognitive load
• Small number of women in applicant pool or review group
• Ambiguous performance criteria for traditionally male position (e.g. “potential” “shows leadership”)
• “Feminine” appearance or scent (even among men)
• Use of abstract rather than concrete language to describe attributes (e.g. “he broke a test tube” “she is clumsy in the lab”)
• Semantic priming with gender-linked words
## Taking an Evidence-Based Approach: Interventions in at least one randomized, controlled study that mitigate bias in evaluation

<table>
<thead>
<tr>
<th>Intervention</th>
<th>Example of study</th>
</tr>
</thead>
<tbody>
<tr>
<td>At least 25% women in the pool being evaluated</td>
<td>Heilman ME. Organ Behav Hum Perf 1980; 26: 386-395, 1980</td>
</tr>
<tr>
<td>Instruction to try to avoid prejudice in evaluation</td>
<td>Blair IV, Banaji MR. J Pers Soc Psychol 70:1142-1163, 1996</td>
</tr>
<tr>

</tbody>
</table>
Applying what we learn beyond UW-Madison

• Dissemination & consultation
  – Train the trainer workshops
  – Lectures
  – Sharing materials and experience

• Research:
  – Semantic priming in NIH Director’s Pioneer Award
  – Wording of tenure criteria
First NIH Roadmap initiative to be rolled out
Intended to accelerate innovative research unsupported through traditional NIH funding mechanisms
$500,000/yr for 5 years
None of 9 awarded first round were women
Women: 6/14 second round (43%); 4/13 third round (31%); 4/12 fourth round (25%)

Carnes, et al. JWH, 2005

“Leader” in tenure criteria

- 25 top research academic medical centers
- Tenure criteria from websites
- Scanned for “Leader”
- Also scanned for other Bem Sex Role Inventory male, female, neutral words
- Slopes of regressions for annual % faculty who are tenured women x 7 years
- “Leader” = OR 6.0 (1.02, 35.37; p=0.04) for slope below median compared to those without

Marchant et al. 2007
Words describing stereotypically male traits predominate in tenure criteria

</tbody>
</table>
Using knowledge to solve human problems (regardless of name) - Backer, 1993

- Making organizations *aware* of the innovation
- Providing *evidence* of effectiveness and feasibility
- *Resources* must be adequate
- Provide *interventions* that encourage individuals and organizations to change
Indicators supporting awareness of WISELI's efforts and perceived value

Visibility and Value of WISELI

Biological & Physical Science Faculty

Visibility and Value of Life Cycle Research Grant Program

Women, N=146; Men, N=527.
* Indicates significant t-test at p<.05.
Evidence for influence on attitudes and behaviors

The Climate for Faculty of Color is Good
Biological & Physical Sciences

New Hires' Satisfaction* With the Hiring Process
Biological & Physical Sciences

* Agree Strongly to the item "I was satisfied with the hiring process overall."
Selected indicators of the success of ADVANCE at UW-Madison

**Climate Change in Department**

For Me Personally

- % Agree Strongly or Somewhat
- Positive Change
- No Change
- Negative Change

- All Faculty
- Women Faculty
- Faculty of Color

Biological and physical science faculty only, N=572.

**Climate Change in Department**

Selected Indicators/Women Faculty

- % Agree Strongly or Somewhat
- I feel that my colleagues value my research
- I feel like I "fit" in my department
- I feel isolated in my department

Biological and physical science faculty only, N=150.

* Indicates significant t-test at p<.05.
Future goals

• Move WISELI model up a level to include 3 main diversity areas
• Move administratively beyond the College of Engineering (proposed move to Graduate School)
• Become self-sustaining
• Re-do all faculty worklife survey every 5 years
Wisconsin Institute for Research and Evaluation on Diversity in Science, Technology, Engineering, and Mathematics

WIRED in STEM

Shared core services, conferences, help with recruitment, keep relevant data from UW Faculty Worklife Survey, program evaluation, etc.

Women and Gender  Ethnic and Racial  Disability
Summary:
signs and symptoms consistent with a transforming institution

- WISELI has launched several innovations that are becoming part of established practices at UW-Madison
- Evidence suggests that overall the climate for women is improving
- Participation in WISELI hiring workshops may increase the number of women hired and change the perception of climate for faculty of color
- The efforts supported by the NSF ADVANCE program have enabled us to examine and critique practices beyond UW-Madison that would be predicted to disadvantage women scientists
4-stage model of institutional and personal readiness for transferring research into practice – Simpson, 2002

- Exposure
- Adoption
- Implementation
- Practice

Incorporates theoretical and industrial research findings from the field of organizational behavior
Fig. 1. Program change model for transferring research to practice.
Leveraging resources

- WISELI Life Cycle Research Grants
- Vilas Life Cycle Research Grants
- Executive Director position from campus funds
- Funds from individual schools and colleges
- Space and staff from College of Engineering
- Additional grants run through WISELI
- Establishing income-generating account for some activities
